

## Feedback — Quiz 5b

[Help Center](#)

Thank you. Your submission for this quiz was received.

You submitted this quiz on **Fri 19 Feb 2016 11:48 PM PST**. You got a score of **100.00** out of **100.00**.

### Question 1

Which of the following expressions corresponds to a dictionary with no elements?

Your Answer		Score	Explanation
<input checked="" type="checkbox"/> <code>dict()</code>	✓	3.00	
<input type="checkbox"/> <code>()</code>	✓	1.00	
<input type="checkbox"/> <code>None</code>	✓	1.00	
<input checked="" type="checkbox"/> <code>{}</code>	✓	5.00	
Total		10.00 / 10.00	

### Question 2

Given an existing dictionary `favorites`, what Python statement adds the key `"fruit"` to this dictionary with the corresponding value `"blackberry"`?

Your Answer		Score	Explanation
<input type="checkbox"/> <code>favorites["fruit"] = "blackberry"</code>	✓	1.00	
<input type="checkbox"/> <code>favorites{"fruit" : "blackberry"}</code>	✓	1.00	
<input checked="" type="checkbox"/> <code>favorites["fruit"] = "blackberry"</code>	✓	7.00	
<input type="checkbox"/> <code>favorites["fruit" : "blackberry"]</code>	✓	1.00	
Total		10.00 / 10.00	

## Question 3

Keys in a dictionary can have which of the following types?

Your Answer		Score	Explanation
<input checked="" type="checkbox"/> Numbers	✓	2.50	
<input checked="" type="checkbox"/> Strings	✓	2.50	
<input type="checkbox"/> Lists	✓	1.25	
<input type="checkbox"/> Dictionaries	✓	1.25	
<input checked="" type="checkbox"/> Booleans	✓	2.50	
Total		10.00 / 10.00	

## Question 4

Values in a dictionary can have which of the following types?

Your Answer		Score	Explanation
<input checked="" type="checkbox"/> Booleans	✓	2.50	
<input checked="" type="checkbox"/> Strings	✓	2.50	
<input checked="" type="checkbox"/> Lists	✓	2.50	
<input checked="" type="checkbox"/> Tuples	✓	2.50	
Total		10.00 / 10.00	

## Question 5

We often want to loop over all the key/value pairs in a dictionary. Assume the variable `my_dict` stores a dictionary. One way of looping like this is as follows:

```
for key in my_dict:
    value = my_dict[key]
...
```

However, there is a better way. We can instead write the following:

```
for key, value in ???:
    ...
```

What code should replace the question marks so that the two forms are equivalent? Refer to the video on dictionaries or the CodeSkulptor [documentation](#).

Your Answer	Score	Explanation
<input type="radio"/> <code>my_dict.values()</code>		
<input type="radio"/> <code>my_dict.keys_values()</code>		
<input type="radio"/> <code>my_dict.keys()</code>		
<input type="radio"/> <code>list(my_dict)</code>		
<input checked="" type="radio"/> <code>my_dict.items()</code>	✓ 10.00	
<input type="radio"/> <code>items(my_dict)</code>		
Total	10.00 / 10.00	

## Question 6

Conceptually, the purpose of a dictionary is to represent a relationship between two collections of data — each key in the dictionary is related to one value. Which of the following situations are instances of such a relationship?

Do not include situations where you have to introduce additional information in order to fit them into such a relationship.

Your Answer	Score	Explanation
<input checked="" type="checkbox"/> Storing students' IDs (identification numbers) and grades for a particular assignment	✓ 4.00	Yes, map each ID (key) to the corresponding grade (value). Each ID should be unique — otherwise it shouldn't be considered an ID.

<input type="checkbox"/> Computing averages	✓	1.00	No, dictionaries don't compute anything.
<input checked="" type="checkbox"/> Storing a sensor's data samples and the time of each sample	✓	4.00	Yes, map each time (key) to the corresponding sample (value).
<input type="checkbox"/> Storing a sensor's data samples	✓	1.00	No, there is no explicit relationship in this example. Conceptually, that would just be a list or, possibly, set of data.
Total		10.00	
		/	
		10.00	

Question Explanation

Note that it is possible to use dictionaries to represent sets and ordered collections. However, the focus of this question is on the relationship between data.

Question 7

Assume we have the following definition:

```
def is_even(number):  
    """Returns whether the number is even."""  
    return number % 2 == 0
```

Which of the following will compute a list of all of the even elements of list `my_list`?

Refer to this week's Programming Tips video about list comprehensions. Also, try each example in [CodeSkulptor](#) before answering the question.

Your Answer	Score	Explanation
<input checked="" type="checkbox"/> <code>[n for n in my_list if is_even(n)]</code>	✓ 4.00	
<input type="checkbox"/> <code>[if is_even(number): number for number in my_list]</code>	✓ 1.00	Syntactically incorrect
<input type="checkbox"/> <code>[is_even(number) for number in my_list]</code>	✓ 1.00	Returns a list of Booleans
<input checked="" type="checkbox"/> <code>[number for number in my_list if is_even(number)]</code>	✓ 4.00

10.00

## Question 8

You have the following code. The goal is to display a portion of the image, rescaling it to fill the canvas.

```
import simplegui

frame_size = [200, 200]
image_size = [1521, 1818]

def draw(canvas):
    canvas.draw_image(image, image_size,
                      [image_size[0] / 2, image_size[1] / 2],
                      [frame_size[0] / 2, frame_size[1] / 2],
                      frame_size)

frame = simplegui.create_frame("test", frame_size[0], frame_size[1])
frame.set_draw_handler(draw)
image = simplegui.load_image("http://commondatastorage.googleapis.com/codes
kulptor-assets/gutenberg.jpg")

frame.start()
```

Run it, and observe that nothing is displayed in the frame. What is the problem?

**Your Answer****Score****Explanation**

10.00

The source arguments in `draw_image` are incorrect. We are trying to load pixels that are not within the image, and thus the draw fails.

The destination arguments in `draw_image` are incorrect. We aren't specifying values that would draw the image on this size canvas.

One or more of the `draw_image` arguments are of the wrong type.

The file doesn't exist.

The file is not an image.

10.00

## Question 9

Write a CodeSkulptor program that loads and draws the following image:

<http://commondatastorage.googleapis.com/codeskulptor-assets/alphatest.png>

with a source center of [220, 100] and a source size of [100, 100]. What one word appears in the canvas? If a letter is capitalized in the image, enter it as a capital.

Note that you do have to position the image as stated to see the correct word.
